

DURA-SEAL ACRYLIC CLEARSEALER

DESCRIPTION:

Proline Dura-Seal is a solvent-based sealer designed to be used over most Proline cementitious toppings, chemical stains and color hardened architectural concrete (stamped or flat). Ideal for interior or exterior use, Dura-Seal Clearsealer will not yellow and has excellent UV stability.

DIRECTIONS FOR USE:

Preparation: Prepare surface by careful and thorough removal of laitance, grease, and foreign matter. Allow surface to dry thoroughly before applying Dura-Seal. Obtain and read Material Safety Data Sheets (MSDS).

Application: Protect surroundings areas. Apply first coat of Proline Dura-Seal by brush, roller or airless sprayer. Allow to dry. Apply second coat (and third coat when applying to high traffic areas) by roller or airless sprayer.

COVERAGE:

A 5 gallon sealer pail covers approximately 1,000 - 2,000 square feet (200 - 400 square foot per gallon).

CAUTION:

Concrete sealers can be extremely slipper when wet. Addition of slip resistant aggregate is recommended for applications around pools and other wet conditions. Higher temperatures will shorten pot life and cure times, while lower temperatures will lengthen dry time and pot life. Not recommended for applications below 50 degrees F.
